Appraisers Association of America

It is with pride that I present this Part III of the Parsons Collection covering the coinages of Spain, Spanish America, and Latin America, together with a selection of United States and Canadian coins that will interest many collectors.

The Parsons Collection has been supplemented with the attractive and important Stone Collection of the colonial and republican issues of Chile, many of which are seldom offered especially in the minor denominations. In addition, the Hartman Collection of 20th Century Mexico offers an almost complete run of the issues of our very fine neighbor to the south whose numismatic history is unrivaled in this hemisphere.

With other smaller consignments included wherever possible, you have presented to you in this catalog a magnificent selection of coins among which more than casual note should be made of the two cincuentines, the Santiago pillar dollar, the full round Mexican eight reales dated 1722, the 1725 Mexican half dollar of Luis, the 1828 Coquimbo peso of Chile, many of the choice gold pieces and many others about which your cataloguer could write almost indefinitely.

Our next auction sale will be held this coming May, just before the annual meeting of the International Association of Professional Numismatists. For the first time, this group of the world's leading dealers in rare coins will meet on this side of the Atlantic. Our sale will feature a fine collection of Holy Roman Empire and German talers, together with other crowns of the world.

At a later time this year we will offer a large "mail only" auction sale presenting many minor coins of the world as well as dollars, talers and crowns.

Have you subscribed to our catalogs plus the lists of prices realized?

The Cincuentines or Fifty Reales pieces are the only multiple dollars of the entire Spanish series. Struck occasionally during the Seventeenth Century, they are extremely rare. Some dates are known with one or two specimens, while those somewhat less rare (the most common dates) may be known with thirty pieces. There are about twenty-two dates known with the largest collection having eighteen ! ! ! !

FOURTH SESSION

WEDNESDAY AFTERNOON, MARCH 9, 1966 — 1:20 P.M.

THE STONE COLLECTION

Colonial Coins of Chile

Chile was first settled in 1541 when Pedro de Valdivia established Santiago. The southern extremity west of the Andes, it remained a part of the Vice-Royalty of Peru until 1778, when it was created a separate Captaincy-General. The War of Independence against Spain began in 1810 and was finally won in April, 1818.

The establishment of a mint at Santiago was authorized by Philip V in 1743 when he gave the minting privilege to Francisco García Hurtado. In 1744 dies for 8 and 4 Escudos pieces were prepared in Spain and later brought to Chile. The king died before the mint was built and new dies for his successor had to be created. When the mint was finally opened in September 1749, according to the official mint history published in 1944 there were three 8 Escudo and three 4 Escudo pieces struck as trials. Presumably this was the only time these were used, thus accounting for the extraordinary rarity of these coins. Gold coinage began in 1749 and silver coins were first struck in 1751 with the classic Pillar Dollar design.

Aside from three or four dates in each of the later bust type series, the Santiago silver coinage is rare. Probably no more than 25 or 30 specimens, including varieties, are known for the other dates. There are no stocks anywhere and there are very few older coins in Chile itself.

SANTIAGO

FERDINAND VI (1746-1759)

- 3481 1749 Gold Four Escudos, assayer J. LCY 336. Fr. 6/69. Medina. 3. The first regular coinage of the Santiago mint. Rare. **PHOTO**. VF-EF. (500.00)
- 3482 1755/4 Eight Reales, assayer J. LCY 1218a. SDNSA 1/38. Medina 9. 27.015 grams. 10.31 specific gravity. Little confirmed information is available for the entire Santiago coinage of this design from 1751 to 1772. Extremely rare, very few collections can boast of having even a single piece of any denomination. This specimen is the only overdate known to the cataloguer. Despite the initials scratched on the reverse, this choice example could well realize more than 2000.00. Extremely Fine. **PHOTO**

FIFTH SESSION

THURSDAY MORNING, MARCH 10, 1966 — 10:20 A.M.

THE STONE COLLECTION

Republican Coins of Chile

With independence from the colonial rule of Spain attained in 1817 and confirmed by final victory in April 1818, the first republican coinage was started in 1817 with the adoption of the volcano and column design. Over the years changes have been made in the monetary system of the country. Many of these changes reflect changing economic conditions or changing political considerations. While the Stone Collection is not complete—what collection ever is?—many series are fully represented in all denominations, dates and many minor varieties. Needless to say, within each series are pieces of great rarity or those that are quite elusive.

In addition to several of the pattern coins which are usually unobtainable, particular attention is called to the famous Coquimbo Peso of 1828. This great rarity, so few specimens of which are known, is a must for every serious collector of Chile or for major collectors of Silver Dollars of the World.

 Reports from Chile state that only twelve of these were struck. Only about seven can be accounted for and each appears to vary slightly. The heavy weight precludes the use of any other standard piece as a flan and helps show the tentative nature of the coinage. It is the most wanted coin of the entire series, both colonial and republican. (2500.00)

Certain coins in the following listings may be considered as being issued prior to or after this decade, but they are included for convenience.

Following is a rather extensive offering of Puerto Rican plantation or hacienda tokens and also merchant's tokens. Those that have not been catalogued in Gould & Higgin are illustrated. Many are extremely rare and if Puerto Rico changes its political status from Commonwealth to Statehood, the sky is the limit for potential values.
